

Keeping Skin Healthy: A Handbook for Community Care Workers in the Pilbara

January 2019

WESFARMERS
CENTRE OF VACCINES
& INFECTIOUS DISEASES

About this handbook

- This Keeping Skin Healthy handbook is for community care workers to support communities in Newman and the Western Desert, Pilbara.
- It is adapted from the third edition of the Recognising and Treating Skin Infections resource and adheres to the National Healthy Skin Guideline for the Prevention, Treatment and Public Health Control of Impetigo, Scabies, Crusted Scabies and Tinea for Indigenous Populations and Communities in Australia (1st edition) 2018. These guidelines are informed by key references used in remote areas for the management of skin infections including the Central Australian Rural Practitioners Association (CARPA) Standard Treatment Manual and the Kimberley Skin Infection Protocol.
- Several of the pictures and illustrations are from the Menzies School of Health Research and Lowitja Institute East Arnhem Regional Healthy Skin Project.
- Cover page artwork is from Martumili Ngurra 2009, by Kumpaya Girgaba, Jakayu Biljabu, Ngamaru Bidu, Thelma Judson, Ngalangka Nola Taylor and Jane Girgaba.

Walker, Roz; Wyndow, Paula; Anshelevich, Ellen; Zheng, Andy; Mullane, Marianne and Bowen, Asha. Keeping Skin Healthy: A handbook for community care workers in the Pilbara. Telethon Kids Institute, January 2019.

Australia's National Institute for Aboriginal and Torres Strait Islander Health Research

Background

This Handbook was developed in response to the findings of four studies conducted with the Western Desert communities since 2007:

- Staying on track: Implementing the Australian Early Development Index in the Pilbara. Roz Walker (2007-2009) funded by BHP
- Aboriginal maternal health and child development program. Roz Walker (2010-2013) funded by BHP
- A PhD study titled: Revealing the public health significance of skin infections among Aboriginal children living in the Pilbara: A call to action in Western Australia. David Hendrickx (2018)
- An Honours research study: Talking skin: Attitudes and practices around skin infections, treatment options, and their clinical management in a remote region in Western Australia. Ingrid Amgarth-Duff (2016)

Acknowledgements

- We would like to acknowledge the following people and organizations for their input in developing this community handbook: Dee Fitzgerald and Kim Gossage (Puntukurnu Aboriginal Medical Service); Peter Johnson and Yvonne Mkandara (Kanyirninpa Jukurrpa); and Ellen Anshelevich and Andy Zheng, visiting student interns, Princeton University, USA.
- We would also like to acknowledge the generosity of Martu families and communities across
 the Western Desert and local health professionals and stakeholders for sharing their
 knowledge and experiences throughout the research studies and contributing to the
 development of this resource.

The purpose of this handbook

This handbook focuses on things Martu people told us would help keep skin healthy:

- Having home visits by Martu health workers to provide medicine
- Talking with families about skin infections and best treatment options
- Involving families and communities in decisions to get healthy skin for their kids.

Yarrkalpa – Hunting Ground, Parnngurr Area, 2013 by Kumpaya Girgirba, Ngamaru Bidu, Thelma Judson, Reena Rogers, Yuwali Janice Nixon, Karnu Nancy Taylor, Nola Taylor, Yikartu Bumba

Contents

Why is skin so important?	6
Beat the bugs	8
Skin sores ("impetigo")	9
Tricky Bugs	18
Boils	19
Scabies	21
Infected Scabies	25
Tinea	29
Hand, foot and mouth virus	36
Environmental health	38
Keeping Skin Healthy	40
Checklist	41

Why is skin so important?

- Skin is our largest organ, so we have to keep it safe!
- It protects our bodies, other organs, and our blood
- If your skin is sick, the rest of your body can get sick too

How can I keep my family's skin healthy?

- Wash hands and face with soap
- Wash children every day
- Eat good tucker every day

Other suggestions for **keeping skin healthy**:

Prevent

- Wash towels, clothes and bedding regularly and dry in sun
- Wear shoes, long pants and long sleeves in the bush

Care

- Moisturise dry, cracked skin
- Cover skin sores from dirt or scratching
- Apply bush medicines

Check

If skin is not getting better, talk to your community care worker or go to the clinic

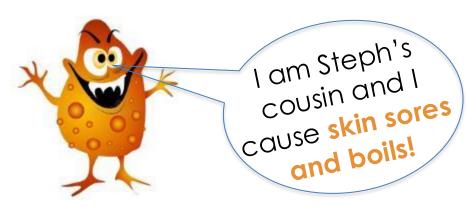

Beat the Bugs that attack your skin!

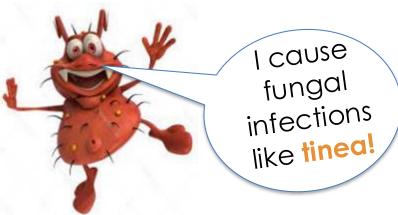

Scottie the Scabies Mite

Mr. Steve the Staph bug

Fred the Fungus

These bugs are so tiny you can't see them, but they are very harmful

Skin sores (Impetigo)

- Skin sores happen when
 Stephie the Strep bug and
 Steve the Staph bug get into
 the skin through cuts and
 bites
- This is very common in children

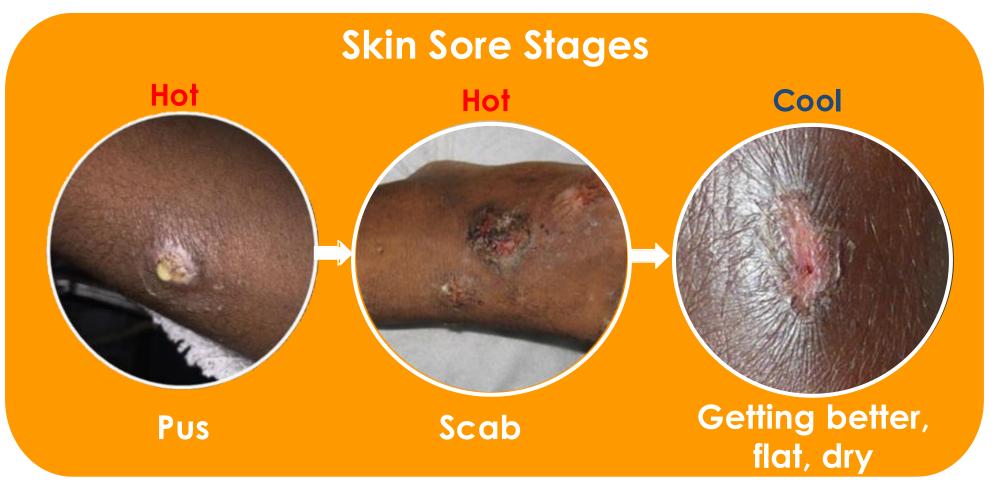

Look for:

- Yellow-brown scabbed sores
- Sores with pus

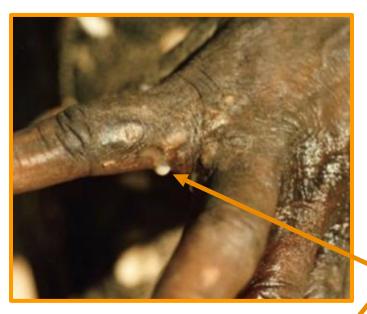

What are the stages of skin sores?

It is very important to treat skin sores(impetigo) straight away

Skin sores that are **HOT**

These have pus

Pus

These look like scabs

Skin sores that are COOL

These sores are healing

Stephie and Steve bugs are dead!!

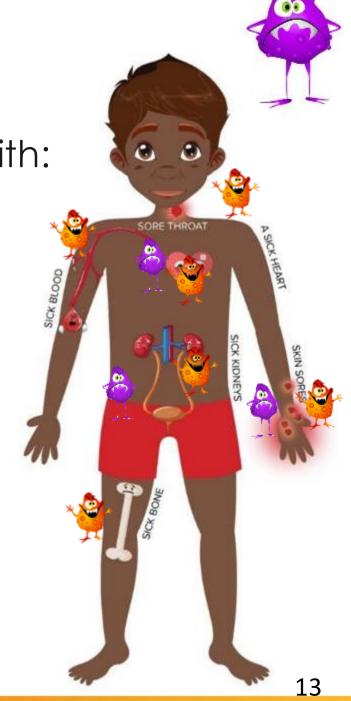

How can skin sores hurt me?

Stephie the Strep bug and Steve the Staph bug can make you very sick with:

- Boils
- Sepsis = Sick Blood
- Bone and Joint infections
- Kidney Disease
- Rheumatic Heart Disease

If these sicknesses aren't treated properly, you might have to go to hospital

What if I've got a HOT skin sore?

- Oo to the clinic straight away!
- The clinic will give you medicine and tell you when and how to take it
- Your community care worker will help you with your treatment plan

What medicines treat skin sores?

A OR B

Oral Septrin
(drink medicine)
No needles

Morning and Night for <u>3 days</u>

IM benzathine penicillin G (BPG) A needle in the thigh

One dose straight away

What if my medicine does not work? They might be tricky bugs!

- First, make sure you took all your medicine
- Tricky bugs look the same as skin sores but sometimes a different medicine might be needed to beat them
- Talk to your community care worker or nurse if you are worried that the sores are still hot!

Hot skin sore

What if I've got Tricky Bugs?

The community care worker will swab to check what bug is there

It will be important to wash the sores with soap until they find out if the bug is MRSA

The doctor will give you **new medicine** when they find out what bug it is

Boils

Happen when Steve the Staph bug gets into a hair root or sweat pore

Look for:

- One or more red lumps
- Sometimes fever
- Usually on face, neck, armpits, shoulders and bottom
- Boils are treated with oral Septrin morning and night for five days

How can I protect my family from skin sores and boils?

- Wash children every day
- Wash hands and face with soap and water

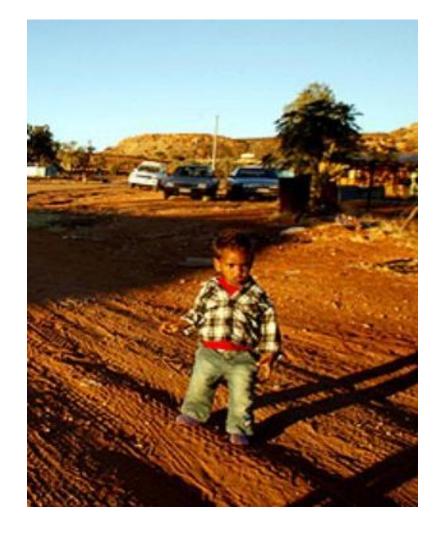

Wash and dry towels, clothes and bedding often

Wear shoes, long pants, and long sleeves in the bush

Scabies

- You get scabies when Scottie the Scabies mite goes under your skin and lays eggs
- You can get scabies from other people with scabies if you touch their skin, their clothes, or the bed they sleep on

How do I know if I've got Scabies?

Look for:

- Itching, sometimes over the whole body and more itchy at night
- Scratches, sores on wrists, elbows, knees, ankles and bottom, and between fingers and toes
- Pimple-like bumps on the hands and feet of babies and sometimes their whole body

What do I use if I've got Scabies?

Use topical permethrin 5% (cream) all over your body

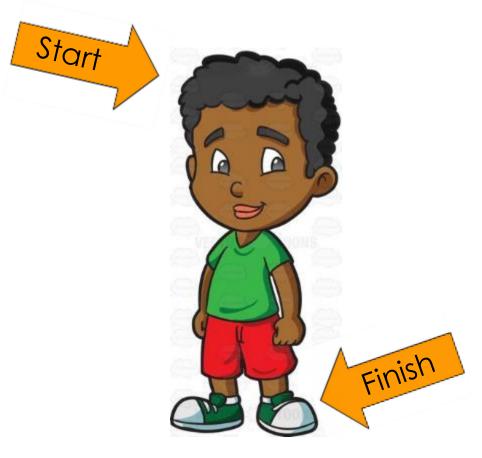

Apply straight away and again in one week's time

What do I do if I've got Scabies?

How to use the cream

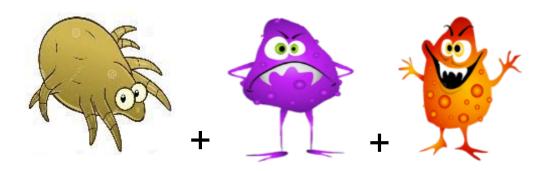

- Rub cream on after shower
- Rub cream over entire body (head to toe)
- No cream on the eyes, lips and mouth
- 4. Rub more on hands again after washing
- Leave cream on overnight, wash off in the morning

Cover your whole body head to toe!

What is Infected Scabies?

Infected Scabies happens when skin that has Scabies becomes infected with Stephie the Strep bug and Steve the Staph bug

Signs that scabies could be infected:
Look for: Scab and Pus

Scab

Pus

What if I've got infected scabies?

The clinic will give you medicines for both scabies and skin sores

Topical Permethrin Cream for Scabies

Oral Septrin Drink medicine for Skin Sores

How can I protect my family against Scabies?

- Wash your hands with soap and dry them properly
- Treat scabies straight away
- Check and treat other family members for scabies

Why is treating Skin Sores and Scabies

so important?

It makes our skin healthy so it can protect our bodies and beat the bugs!

Kids with healthy skin are happier and do well at school

Tinea (Ringworm)

- Fred the fungus Tinea is a common fungal infection of the skin, scalp and nails
- Fred the fungus is a different bug and needs to be treated with different medicines
- It spreads mainly between people and dogs (and cats)
- It lasts a long time if you don't go to the clinic

How do I know if I've got Tinea?

Look for:

- Scaly patches on skin
- Darker and tougher skin
- Broken white or yellow nails

Remember: Fred the fungus can be anywhere!

Body tinea

Hand and thumbnail tinea

Nail tinea

What if I've got Tinea?

If your child or family member has tinea, go to the clinic straight away!

If Fred the Fungus is not treated, it can lead to other sickness, and you might need to go to the hospital.

What medicine is used to treat Tinea?

For small patches

Topical miconazole (2% cream)

For big rashes

Oral terbinafine (Lamisil pill)

Morning and night for 4-6 weeks

Once a day for 2 weeks

What if I've got Tinea of the scalp?

Oral terbinafine (Lamisil pill)
Once a day for 4 weeks

Scalp Tinea

Photo from Dermnet https://www.dermnetnz.org/, Image courtesy of DermNet NZ https://creativecommons.org/licenses/by-nc-nd/3.0/nz/legalcode

/ Antifungal shampoo

(ketoconazole)

Wash hair and scalp with this shampoo often while taking the Lamisil pill

What if I've got nail Tinea?

Once a day for 12 weeks (toenails)

How can I protect my family against Tinea?

- 👀 Treat tinea straight away
- Wash your hands with soap and dry them a clean towel
- Check other family members for tinea
- Keep dogs outside the house
- Use bush medicines

Hand, foot and mouth virus

- Happens when a virus gets into your body
- Hand, foot and mouth (HFM) virus makes it easier for the other bugs to get into your skin
- It is very common in children
- If your child has HFM once, they are unlikely to get it again
- Always go to the clinic if your child's skin is not healthy

Look for:

- Rash in the mouth, on the hands and feet
- Fever
- Runny nose

How can I protect my kids against Hand, foot and mouth virus?

- Always wash your hands with soap after changing baby's nappies or going to the toilet
- Wash toys that children play with

Keep kids home from childcare or school until the rash is gone to stop other kids getting sick

Environmental health is also important!

Healthy skin needs healthy homes!

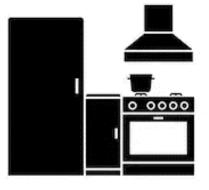

Running water!

Taps that work!

Rubbish in bins and bags!

Places to store food. Stove & fridge working!

Clean floors!

A clean towel for everyone!

Washing line, pegs and basket!

Environmental health is also important!

Healthy skin needs healthy communities

Good tucker in local store

Work together to clean up rubbish in your community

Keep dogs outside homes

Have a yarn with the environmental health team about ways to make your community healthy

Keeping Skin Healthy

Keeps communities healthy and their children healthy, happy and doing well at school

Checklist of things to talk about

	Wash hands often*	Wear long pants, long sleeves and shoes in bush	Wash body, bedding, toys and clothes and dry properly	Go to clinic and treat straight away	Keep dogs outside home	Contagious when hot (pus and scab)	Check other family members	Healthy homes and communities
Skin sores/ boils	1	1	1	1	1	1	1	\
Scabies/ infected scabies	√	√	1	√	1	√	1	/
Tinea	1	1	1	1	1	1	1	1
Hand, foot and mouth virus	√		/	/			\	

^{*}Especially after changing nappies and going to the toilet and before eating or preparing food

Let's work together to beat the bugs!
